

# **SUCCESS SECRETS WITH ALEX**

## **Mini-Project: Work with this API**

**SHERIN MARY P.J**

### **GOAL**

- Use **Vibe Coding**
- Ask ChatGPT - Step by Step Instructions on how to work with this API?
- <https://openweathermap.org/api>
- Implement 3 to 4 GET requests/ POST requests
- Don't Code. Just ask ChatGPT to write it.
- Share Results in the Community

### **[STEP 1] Learn how to work with the API**

**ACTION** → *ACT as the best Javascript Coder in the world and help me with this.*

**PURPOSE** → *We are going to learn how to work with this API. I am going to run the code in an online code editor.*

**INPUT** → <https://openweathermap.org/api>

**OUTPUT** → *Search the Internet and give me step by step instructions on how to work with this API.*

### **[STEP 2] Create Code for a few GET functions/ POST function :**

## CODE

### HTML

```
<!DOCTYPE html>

<html>

<head>

    <title>Cat API Project</title>

</head>

<body>

<h2>Cat API Project</h2>

<p>Open Console (F12) to see the output.</p>

<script src="script.js"></script>

</body>

</html>
```

### JS CODE

```
// =====

// CAT API PROJECT

// Name: SHERIN MARY P.J
```

**// 4 GET Requests + 1 POST Request**

**// =====**

**// -----**

**// API KEY**

**// -----**

**const apiKey =**

**"live\_81HUyM2PJwNbN4mfgE2UWIFMEvjJ9Y1voOMe13mYXLcyHbgc18iWgLsAIW1QHaKq";**

**// =====**

**// GET REQUEST 1**

**// Random Cat Image**

**// =====**

**async function getRandomCat() {**

**try {**

**const response = await fetch(**

**"https://api.thecatapi.com/v1/images/search",**

**{**

**headers: {**

**"x-api-key": apiKey**

**}**

**}**

```

    );

    const data = await response.json();

    console.log("===== GET REQUEST 1 =====");

    console.log("Random Cat");

    console.log(data);

}

catch (error) {

    console.log(error);

}

// =====

// GET REQUEST 2

// Five Random Cat Images

// =====

async function getFiveCats() {

    try {

        const response = await fetch(

            "https://api.thecatapi.com/v1/images/search?limit=5",

            {

                headers: {

                    "x-api-key": apiKey

                }

            }

```

```

    }

    );

    const data = await response.json();

    console.log("===== GET REQUEST 2 =====");

    console.log("Five Random Cats");

    console.log(data);

}

catch (error) {

    console.log(error);

}

}

// =====

// GET REQUEST 3

// Get All Cat Breeds

// =====

async function getBreeds() {

    try {

        const response = await fetch(

            "https://api.thecatapi.com/v1/breeds",

            {

                headers: {

```

```
        "x-api-key": apiKey
    }

}

);
```

```
const data = await response.json();

console.log("===== GET REQUEST 3 =====");

console.log("Cat Breeds");

console.log(data);

}

catch (error) {

    console.log(error);

}

}

// =====

// GET REQUEST 4

// Get Ten Random Cat Images

// =====

async function getTenCats() {

    try {
```

```
const response = await fetch(

  "https://api.thecatapi.com/v1/images/search?limit=10",

  {

    headers: {

      "x-api-key": apiKey

    }

  }

);

const data = await response.json();

console.log("===== GET REQUEST 4 =====");

console.log("Ten Random Cats");

console.log(data);

}

catch (error) {

  console.log(error);

}

}

// =====

// POST REQUEST

// JSONPlaceholder API
```

```
// =====
```

```
async function createPost() {  
  
  try {  
  
    const response = await fetch(  
  
      "https://jsonplaceholder.typicode.com/posts",  
  
      {  
  
        method: "POST",  
  
        headers: {  
  
          "Content-Type": "application/json"  
  
        },  
  
        body: JSON.stringify({  
  
          title: "Cat API Project",  
  
          body: "Learning GET and POST requests",  
  
          userId: 1  
  
        })  
  
      }  
  
    );  
  
    const data = await response.json();  
  
    console.log("===== POST REQUEST =====");  
  
    console.log("POST Response");  
  
    console.log(data);  
  
  }  
  
}
```

```
}

catch (error) {

    console.log(error);

}

}

// =====

// CALLING ALL FUNCTIONS

// =====

//getRandomCat();

getFiveCats();

//getBreeds();

//getTenCats();

createPost();
```

**OUTPUT**
