

SUCCESS SECRETS WITH ALEX

Mini-Project: Monitor Bitcoin Price

SHERIN MARY P.J

GOAL

- Use Vibe Coding
- Only run on Replit - JS - One .js
- Can use External API to get Data
- Run every 5 seconds → 30 seconds → 2 minutes → 5 minutes
- Get Current Bitcoin Price (Convert to INR)
- Save to .csv file with timestamp
- Use csv as a database to log historical Bitcoin price

PROMPT

Act as an expert Node.js developer.

Build a single-file JavaScript (index.js) program that runs in Node.js.

GOAL:

Create a Bitcoin price tracker using a public API.

REQUIREMENTS:

1. Use external public API (CoinGecko):

https://api.coingecko.com/api/v3/simple/price?ids=bitcoin&vs_currencies=INR

2. Fetch Bitcoin price in INR.

3. Run automatically every 5 seconds.

4. Save data into a CSV file named:

bitcoin_prices.csv

5. CSV format

timestamp,price_in_inr

6. Append new data every time (do not overwrite file).

7. Add timestamp in ISO format.

8. Console should show live output like:

BTC Price: ₹xxxxx | timestamp

9. Keep everything in ONE file only (index.js).

10. Use only built-in Node.js features (no external libraries).

OUTPUT:

Give only clean working JavaScript code with no explanation.

API

https://api.coingecko.com/api/v3/simple/price?ids=bitcoin&vs_currencies=inr

CODE

```
const fs = require("fs");
```

```
// Intervals (ms)
```

```
const intervals = [5000, 30000, 120000, 300000];

let index = 0;

const CSV_FILE = "bitcoin_prices.csv";

// Create CSV header if file doesn't exist

if (!fs.existsSync(CSV_FILE)) {

    fs.writeFileSync(CSV_FILE, "timestamp,price_in_inr\n");

}

// Fetch Bitcoin price from CoinGecko

async function fetchBitcoinPrice() {

    try {

        const response = await fetch(

            "https://api.coingecko.com/api/v3/simple/price?ids=bitcoin&vs_currencies=inr"

        );

        const data = await response.json();

        const price = data.bitcoin.inr;

        const time = new Date().toISOString();

        console.log(`BTC Price: ₹${price} | ${time}`);

        saveToCSV(time, price);

    } catch (err) {

        console.log("Error fetching price:", err.message);

    }

}
```

```

    }

}

// Save to CSV (database)

function saveToCSV(time, price) {

    const row = `${time},${price}\n`;

    fs.appendFileSync(CSV_FILE, row);

}

// Run with changing intervals

function startTracker() {

    setInterval(() => {

        fetchBitcoinPrice();

        console.log(`Next interval: ${intervals[index]} ms`);

        index = (index + 1) % intervals.length;

    }, 5000); // base tick every 5 sec

}

// Start immediately

fetchBitcoinPrice();

startTracker();

```

OUTPUT

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS  node + v [ ] [ ] ... | [ ] [ ] X

[FINAL STEP] Instructions for Sharing Your "Mini-Project: Monitor Bitcoin Price" Google Doc

Congratulations on completing your "Mini-Project: Monitor Bitcoin Price"! Sharing your work with our community is a powerful step toward turning them into reality. Here's how you can share your document with view-only access:

Add your Prompt, Code, Output and Screenshots to the Google Doc.

Also record a LOOM to showcase your Presentation Skills.

Steps to Share Your Google Doc:

- 1. Open Your Document:**
 - Navigate to your Google Drive and open the document you've created.
- 2. Access Sharing Settings:**
 - Click on the blue "Share" button located in the top-right corner of the document.
- 3. Get Shareable Link:**
 - In the sharing window, click on "Get shareable link" in the top-right corner.
- 4. Set Link Permissions:**
 - A link will be generated, and you'll see a dropdown menu.
 - Select "Anyone with the link can view" to ensure others can see your document but not edit it.
- 5. Copy the Link:**
 - Click "Copy link" to copy the URL to your clipboard.
- 6. Share with the Community:**
 - Paste the link into our Skool Community to share your document with fellow members.
- 7. Add your Name on Top:**

- Make sure to mention your name on top so that we know who submitted the assignment.
