Mini-Project: Build your Automation in Integrately

SHERIN MARY P.J

Smart Email Organizer using Integrately

What is the purpose?

The main purpose of this project is to **automatically collect incoming Gmail emails and organize their information inside Airtable**, without manually copying email details.

Instead of checking every email and entering the details into a database, Integrately connects Gmail with Airtable and performs the work automatically.

How your project works

Your automation follows this flow:

Gmail → Integrately → Airtable

1. Gmail — Email Trigger

When a new email arrives in your Gmail account, Integrately detects it.

For example:

- Subject: Security Alert
- Sender: no-reply@accounts.google.com
- Message/Body: Email content
- Date: Email received date
- Message ID: Unique Gmail ID

2. Integrately — Automation

Integrately acts as the **middle layer** between Gmail and Airtable.

It receives the email information from Gmail and maps the required information to the Airtable fields.

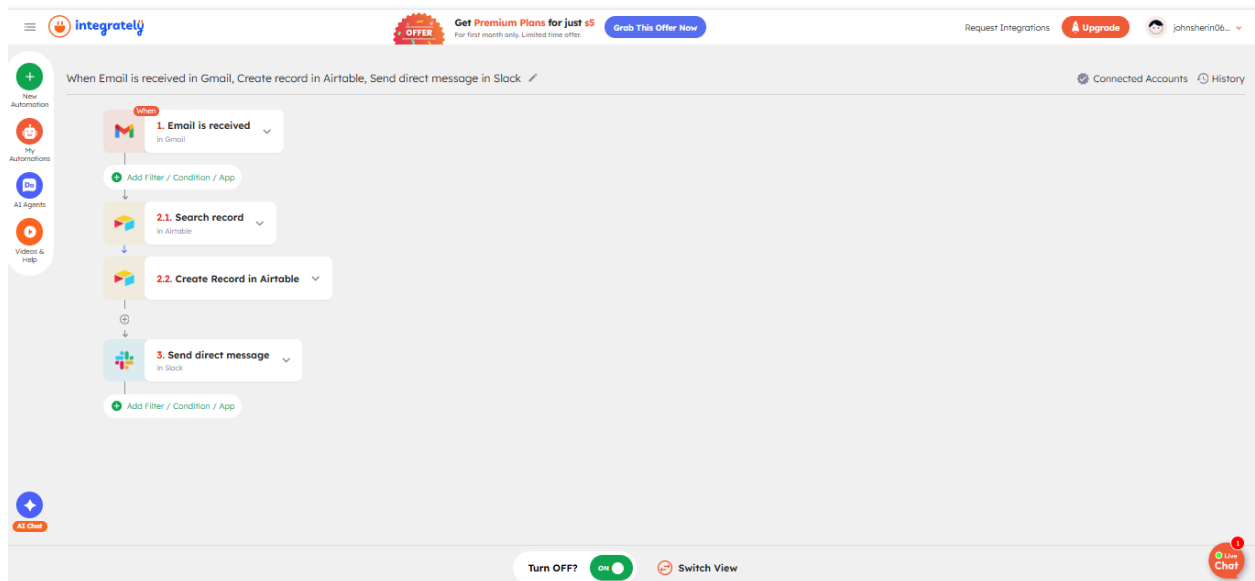

You configured things such as:

- Subject
- Sender
- Message
- Date
- Status
- Email ID

3. Airtable — Storage

The email information is then stored as a new record in your **Smart Email Organizer** Airtable table.
