

SUCCESS SECRETS WITH ALEX

Mini-Project: Build your Second Automation in Make **SHERIN MARY P.J**

AI Scam Shield

1. User sends a message

You paste a suspicious email or message into your Telegram bot.

2. Telegram receives it

The Watch Updates module in Make.com captures the message.

3. Make.com sends it to Gemini

Make.com passes the message text to Google Gemini 3.6 Flash.

4. Gemini analyzes it

Gemini checks whether the message looks like:

- Scam
- Fraud
- Phishing
- Safe

It generates:

Scam Probability → Risk Level → Reason → Safety Advice

5. Make.com receives Gemini's result

The Gemini Result is captured by Make.com.

6. Telegram sends the result back

Make.com sends the Gemini analysis back to the same Telegram chat using the Chat ID.
